Retrieval-Augmented Generation (RAG): Paradigms, Technologies, and Trends

Haofeng Wang
Tongji University

CONTENTS

PART 01

Overview of RAG

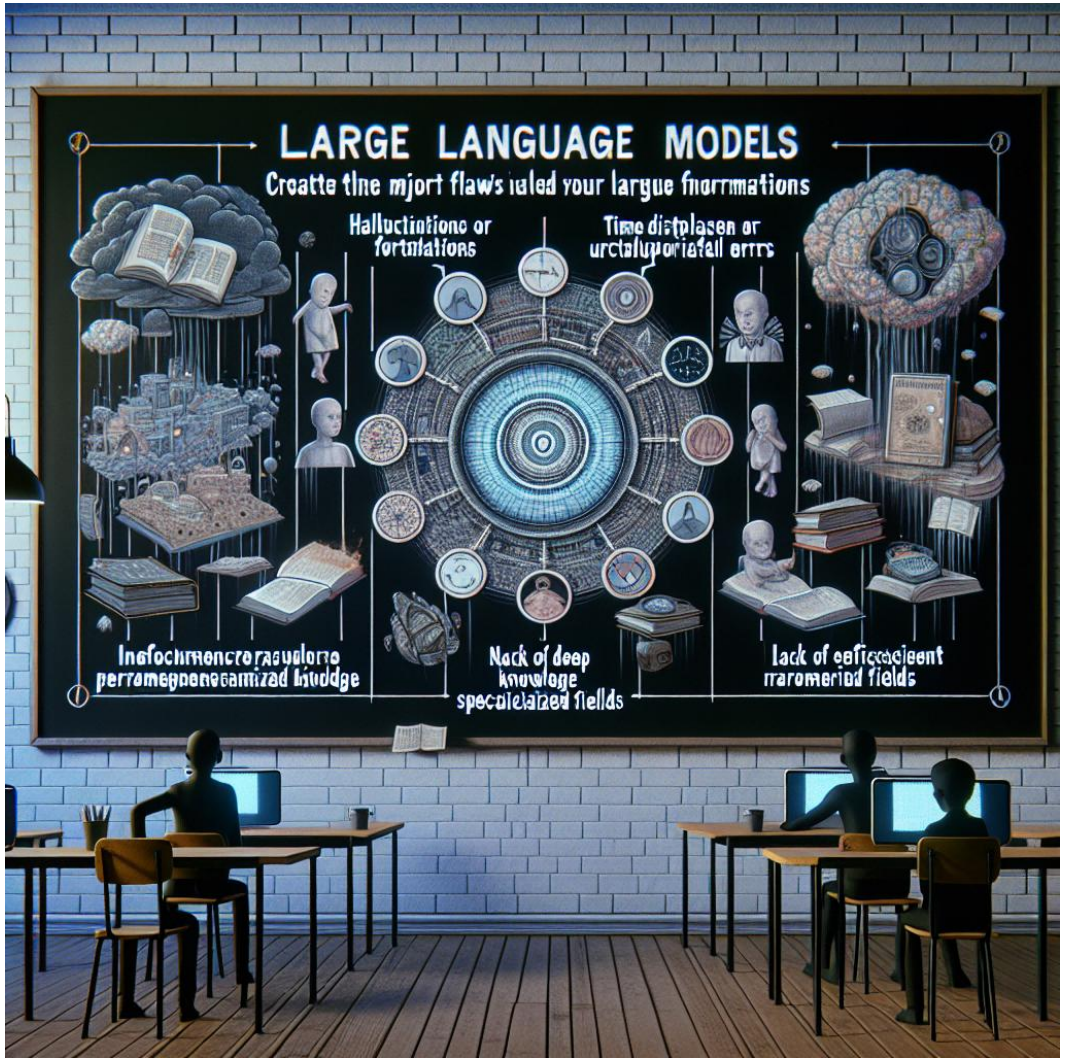
Background

Shortcom of LLM

- Hallucination
- Outdated information
- Low efficiency in parameterizing knowledge
- Lack of in-depth knowledge in specialized domains
- Weak inferential capabilities

Practical Requirements of Application

- Domain-specific accurate answering
- Frequent updates of data
- Traceability and explainability of generated content
- Controllable Cost
- Privacy protection of data



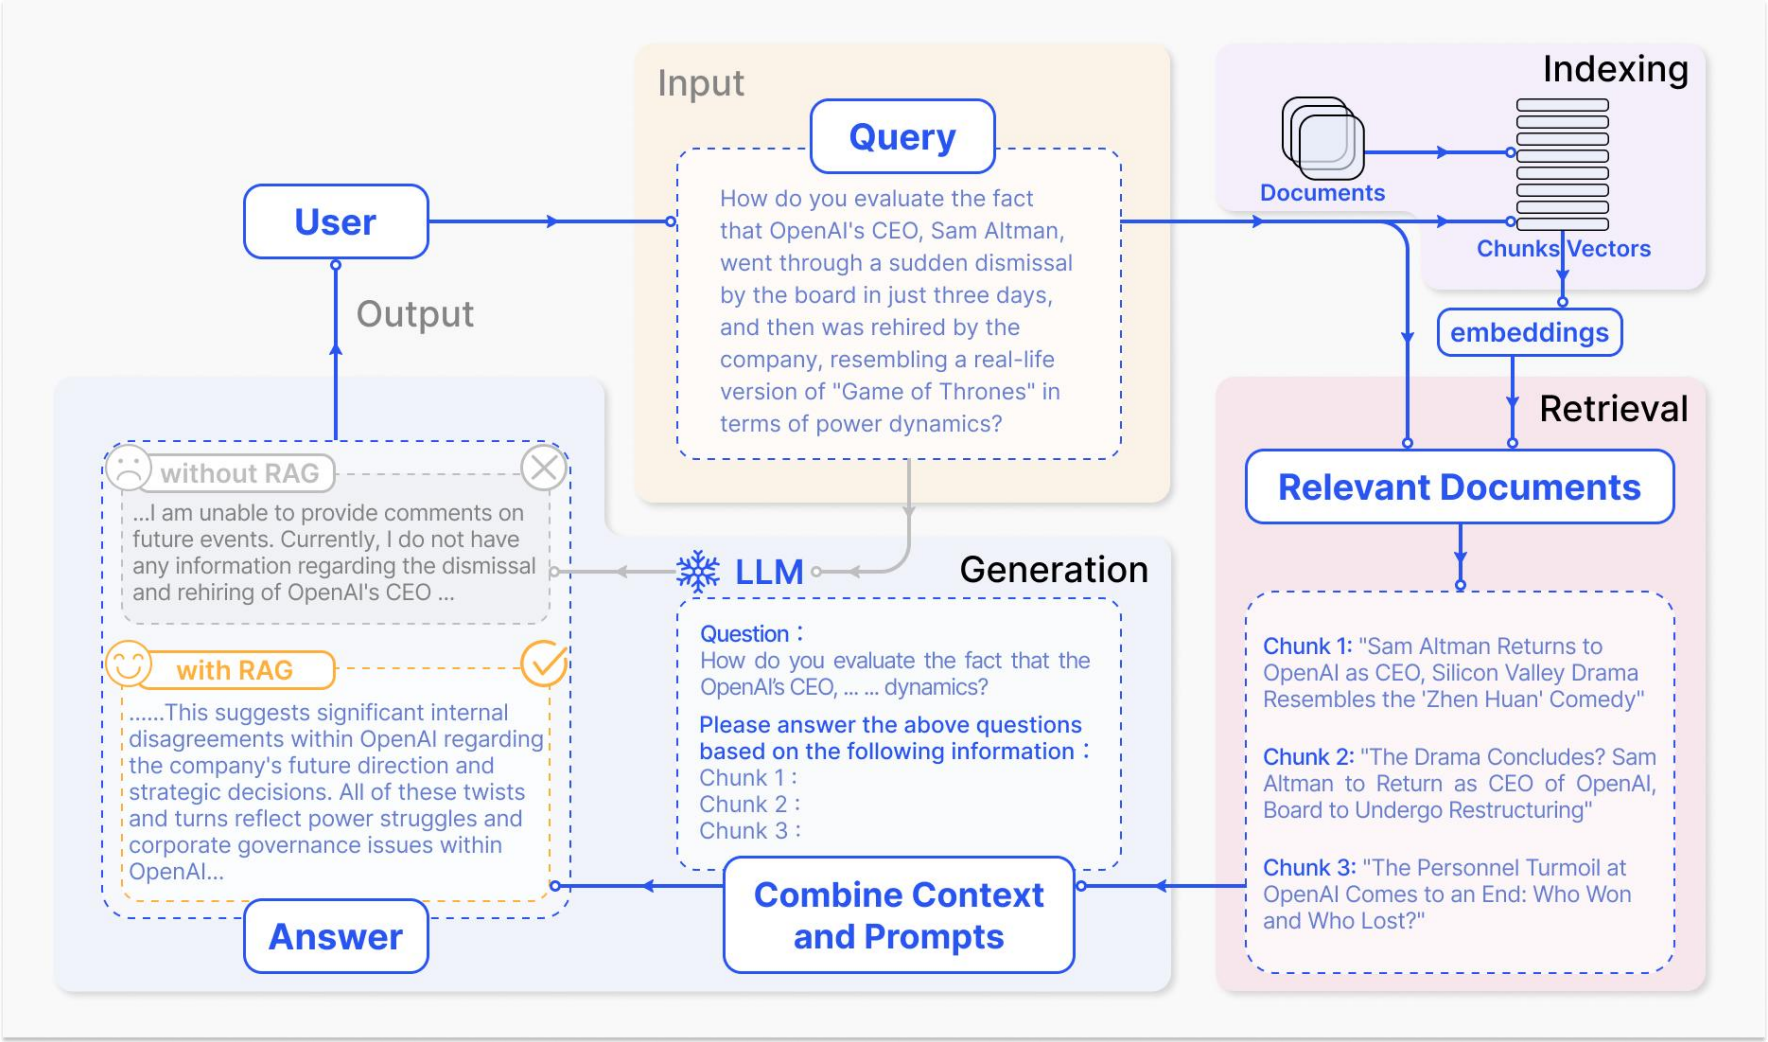
Draw by DALL·E-3

Retrieval-Augmented Generation (RAG)

When answering questions or generating text, LLM first retrieves relevant information from a large number of documents, and then generates answers based on this information.

By attaching a external knowledge base, there is no need to retrain the entire large model for each specific task.

The RAG model is especially suitable for knowledge-intensive tasks.

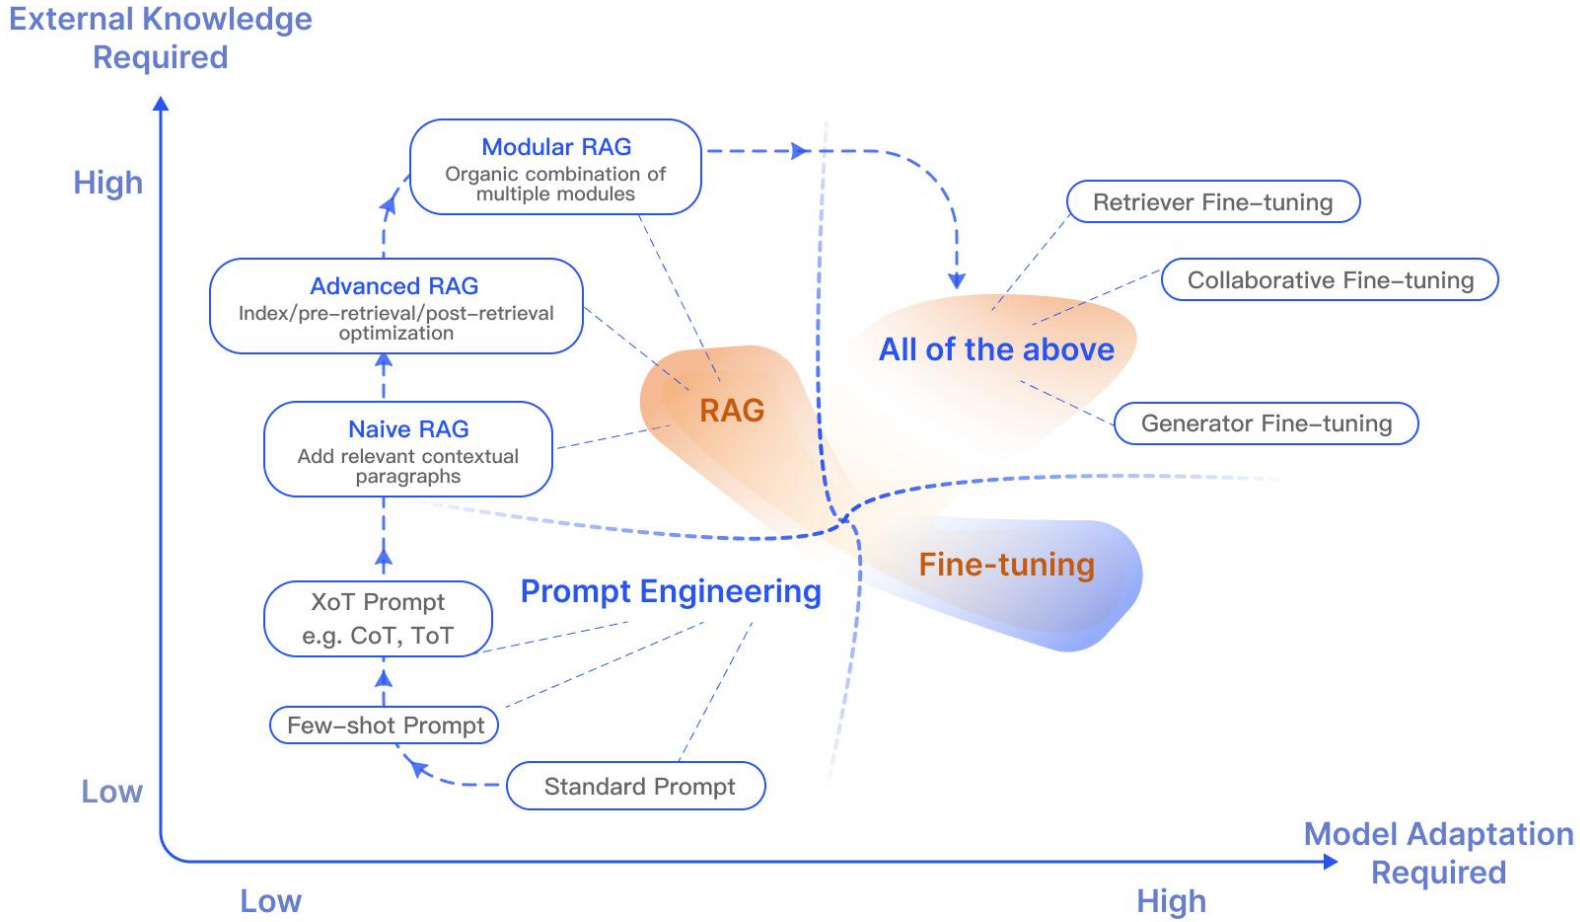


A typical case of RAG

External Knowledge Base vs Knowledge Parametrization

Ways to optimize large models.

- Prompt Engineering
- Retrieval-Augmented Generation
- Instruct / Fine-tuning



A typical case of RAG

RAG vs Fine-tuning

Table 1: Comparison between RAG and Fine-Tuning

Feature Comparison	RAG	Fine-Tuning
Knowledge Updates	Directly updating the retrieval knowledge base ensures that the information remains current without the need for frequent retraining, making it well-suited for dynamic data environments.	Stores static data, requiring retraining for knowledge and data updates.
External Knowledge	Proficient in leveraging external resources, particularly suitable for accessing documents or other structured/unstructured databases.	Can be utilized to align the externally acquired knowledge from pretraining with large language models, but may be less practical for frequently changing data sources.
Data Processing	Involves minimal data processing and handling.	Depends on the creation of high-quality datasets, and limited datasets may not result in significant performance improvements.
Model Customization	Focuses on information retrieval and integrating external knowledge but may not fully customize model behavior or writing style.	Allows adjustments of LLM behavior, writing style, or specific domain knowledge based on specific tones or terms.
Interpretability	Responses can be traced back to specific data sources, providing higher interpretability and traceability.	Similar to a black box, it is not always clear why the model reacts a certain way, resulting in relatively lower interpretability.
Computational Resources	Depends on computational resources to support retrieval strategies and technologies related to databases. Additionally, it requires the maintenance of external data source integration and updates.	The preparation and curation of high-quality training datasets, defining fine-tuning objectives, and providing corresponding computational resources are necessary.
Latency Requirements	Involves data retrieval, which may lead to higher latency.	LLM after fine-tuning can respond without retrieval, resulting in lower latency.
Reducing Hallucinations	Inherently less prone to hallucinations as each answer is grounded in retrieved evidence.	Can help reduce hallucinations by training the model based on specific domain data but may still exhibit hallucinations when faced with unfamiliar input.
Ethical and Privacy Issues	Ethical and privacy concerns arise from the storage and retrieval of text from external databases.	Ethical and privacy concerns may arise due to sensitive content in the training data.

RAG Applications

Scenarios where RAG is applicable:

- Long-tail distribution of data
- Frequent knowledge updates
- Answers require verification and traceability
- Specialized domain knowledge
- Data privacy protection

PART 02

RAG Paradigms Shifting

Naive RAG

Step1. Indexing:

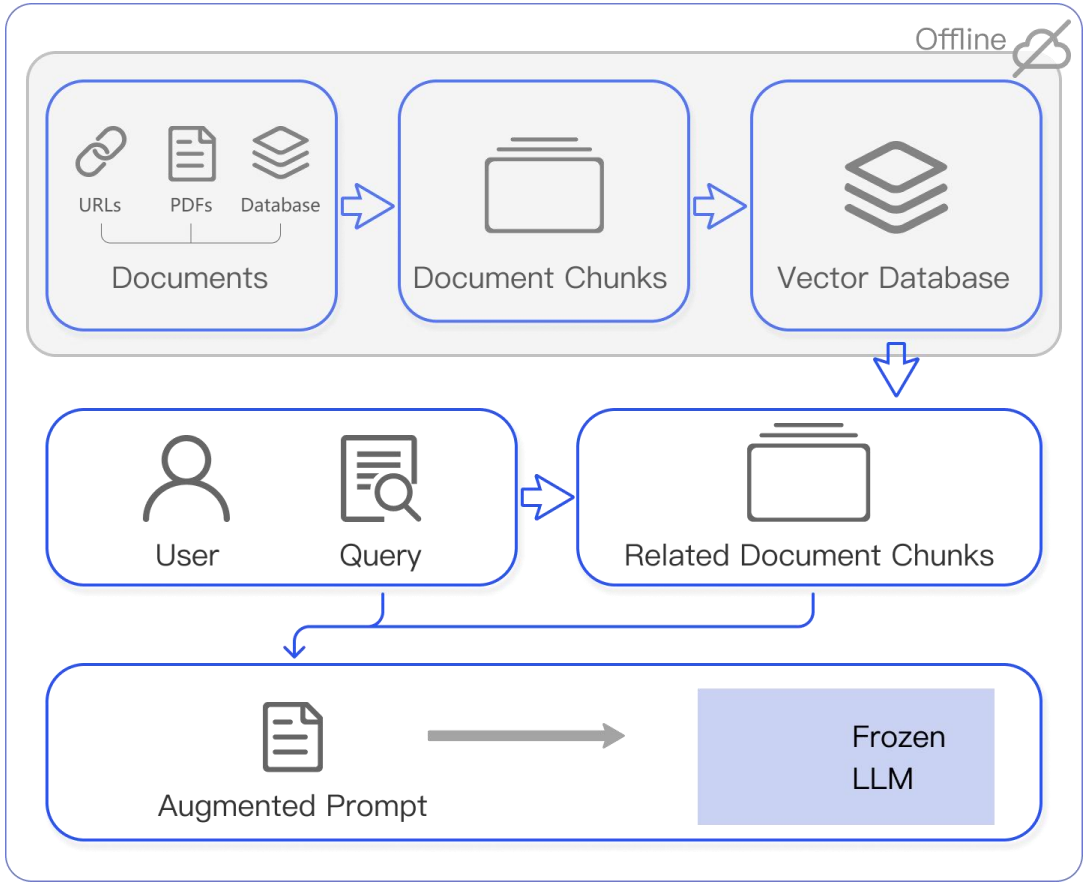
1. Divide the document into even chunks, each chunk being a piece of the original text.
2. Using the encoding model to generate an embedding for each chunck.
3. Store the Embedding of each block in the vector database.

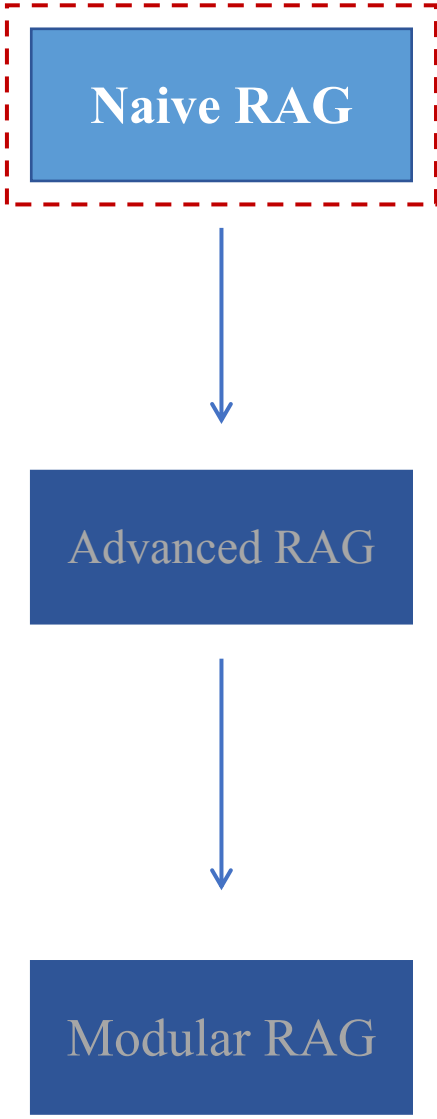
Step2. Retrival

Retrieve the k most relevant documents using vector similarity search.

Step3. Generation

The original query and the retrieved text are combined and input into a LLM to get the final answer

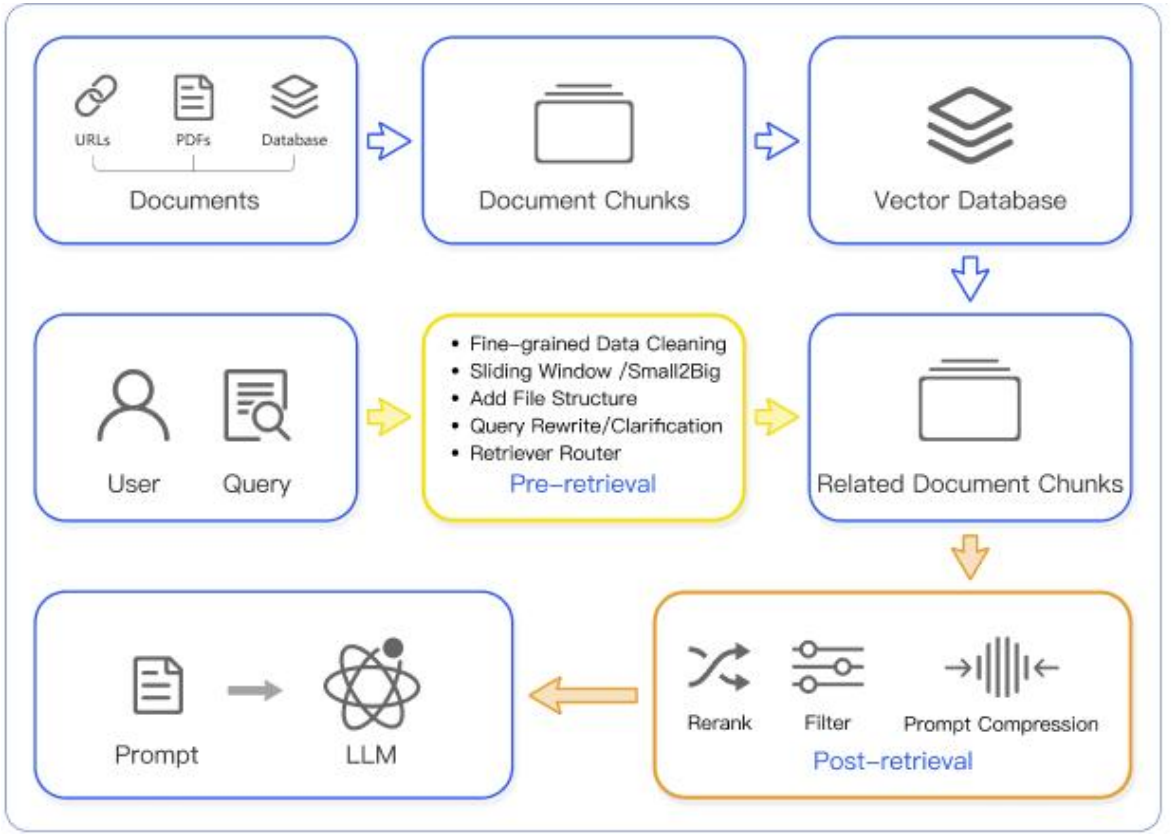




Advanced RAG

Index Optimization → Pre-Retrieval Process → Retrieval → Post-Retrieval Process→ Genaration

- **Optimizing Data Indexing:** sliding window, fine-grained segmentation、adding metadata
- **Pre-Retrieval Process：** retrieve routes, summaries, rewriting, and confidence judgment
- **Post-Retrieval Process：** reorder, filter content retrieval

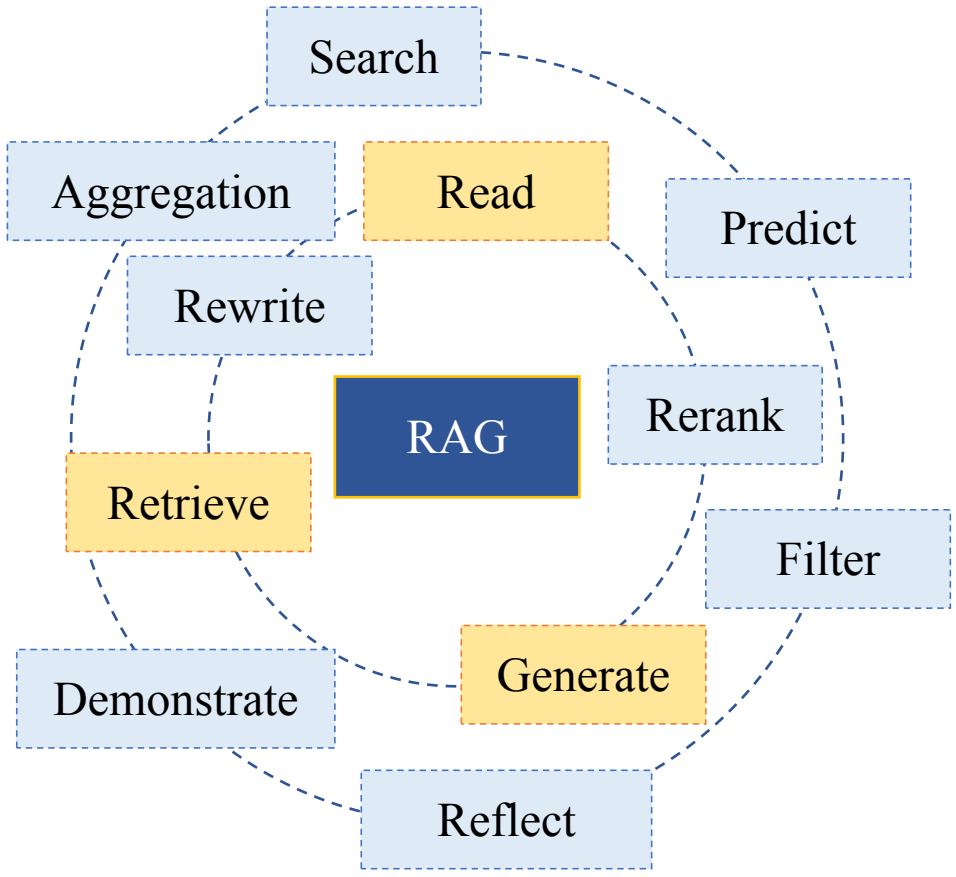


Naive RAG

Advanced RAG

Modular RAG

Modular RAG



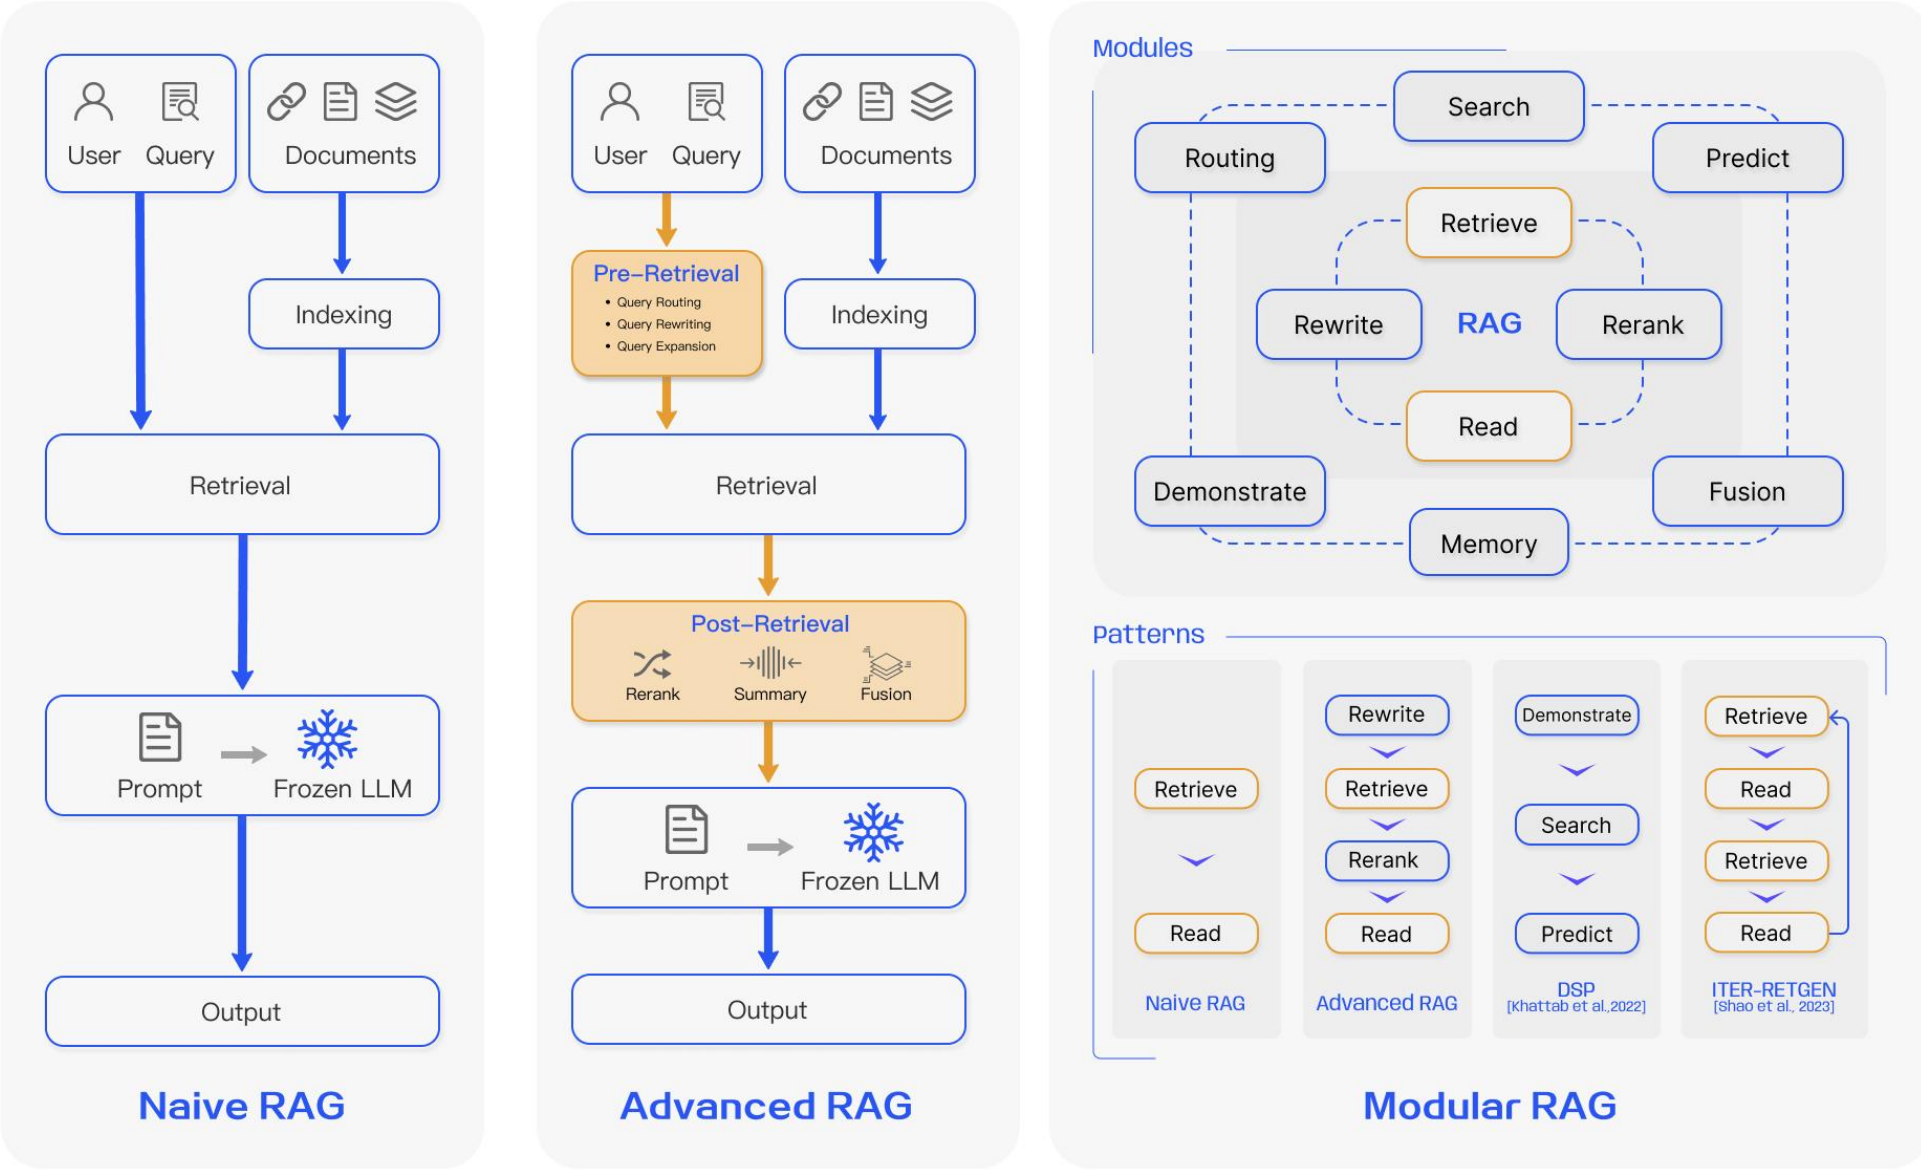
Modules	Pattern			
Naive RAG	Read	Retrieve	Generate	
DSP (2022)	Demonstrate	Search	Predict	Generate
Rewrite-Retrieve-Read (2023)	Rewrite	Retrieve	Read	
Retrieve-then-read (2023)	Retrieve	Read	Generate	

Naive RAG

Advanced RAG

Modular RAG

Comparison of RAG Paradigms



The three key questions of RAG

What to retrieve ?

- Token
- Phrase
- Chunk
- Paragraph
- Entity
- Knowledge graph

When to retrive?

- Single search
- Each token
- Every N tokens (phrase)
- Adaptive search

How to use the retrieved information?

- Input/Data Layer
- Model/Intermediate Layer
- Output/Prediction Layer

Other Issues

Augmentation stage:
- Pre-training
- Fine-tuning
- Inference

Retrieval choice:
- BERT
- Roberta
- BGE
- .....

Model Collaboration

Scale selectionz

Generation choice:
- GPT
- Llama
- T5
- .....

The key issue for RAG -- What to retrieve.

coarse

Retrieval granularity

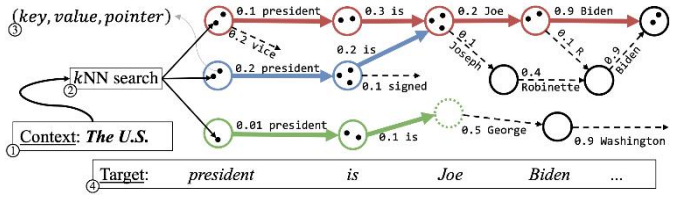
meticulous

low

level of structuration

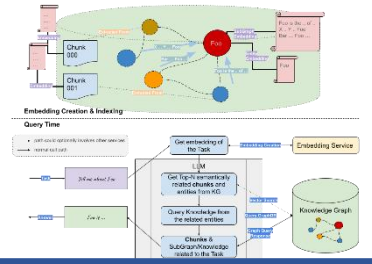
High

Chunk | In-Context RAG 2023



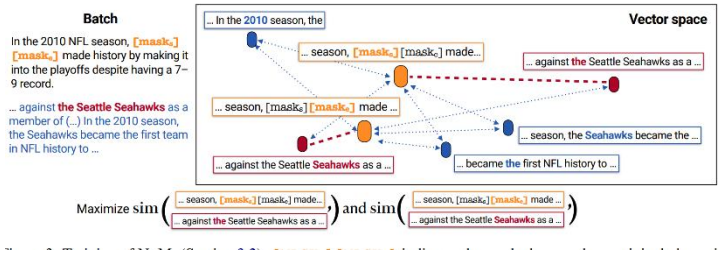
The search is broad, recalling a large amount of information, but with low accuracy, high coverage but includes much redundant information.

Knowledge Graph | 2023

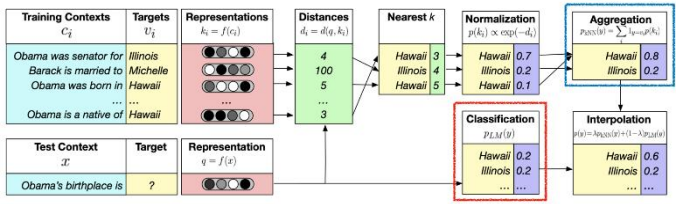


Richer semantic and structured information, but the retrieval efficiency is lower and is limited by the quality of KG.

Phrase | NPM 2023

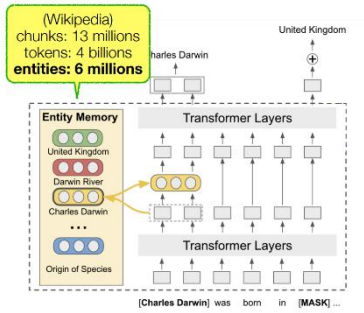


Token | KNN-LMM 2019



It excels in handling long-tail and cross-domain issues with high computational efficiency, but it requires significant storage.

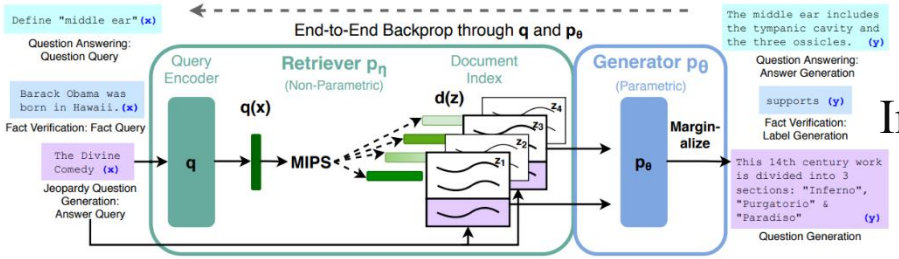
Entity | EasE 2022



The key issue of RAG — How to use the retrieved content.

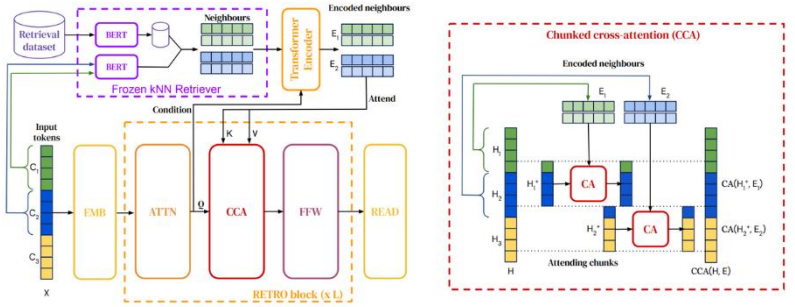
Integrating the retrieved information into different layers of the generation model,during inference process.

Integrate retrieval positions.



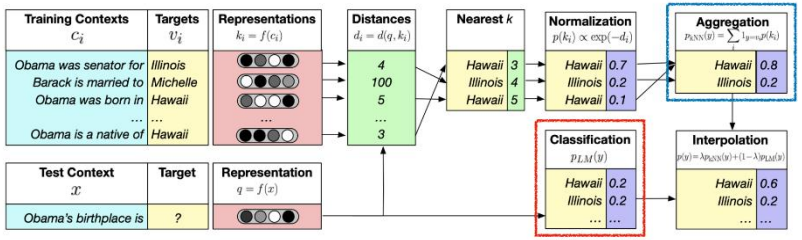
Input / Date layer

Using simple, but unable to support the retrieval of more knowledge blocks, and the optimization space is limited.



Model / Interlayer

Supports the retrieval of more knowledge blocks, but introduces additional complexity and must be trained.



Output /Prediction layer

Ensuring the output results are highly relevant to the retrieval content, but the efficiency is low.

The key issue for RAG -- When to retrieve.

High efficiency, but low relevance of the retrieved documents

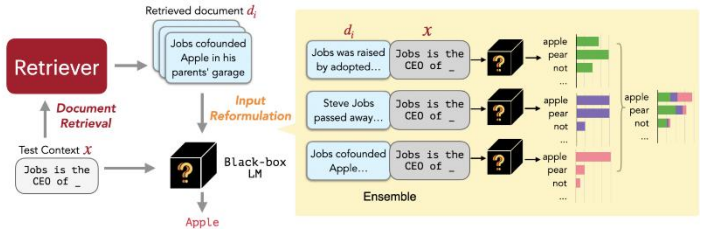
Balancing efficiency and information might not yield the optimal solution

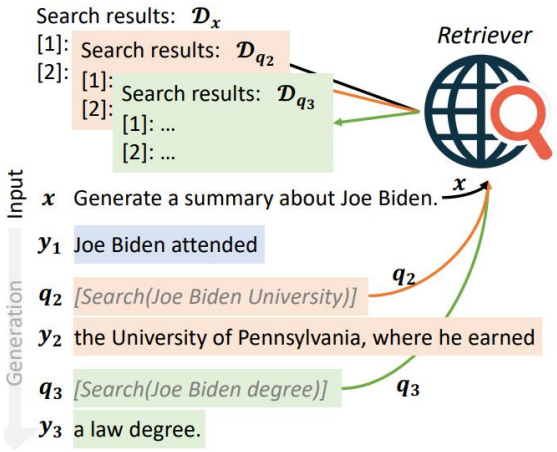
A large amount of information with low efficiency and redundant information.

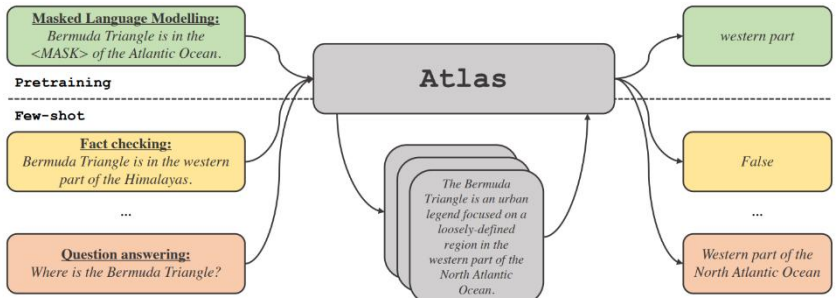
Once | Replug 2023

Adaptive | Flare 2023

Every N Tokens | Atlas 2023







Conducting once search during the reasoning process.

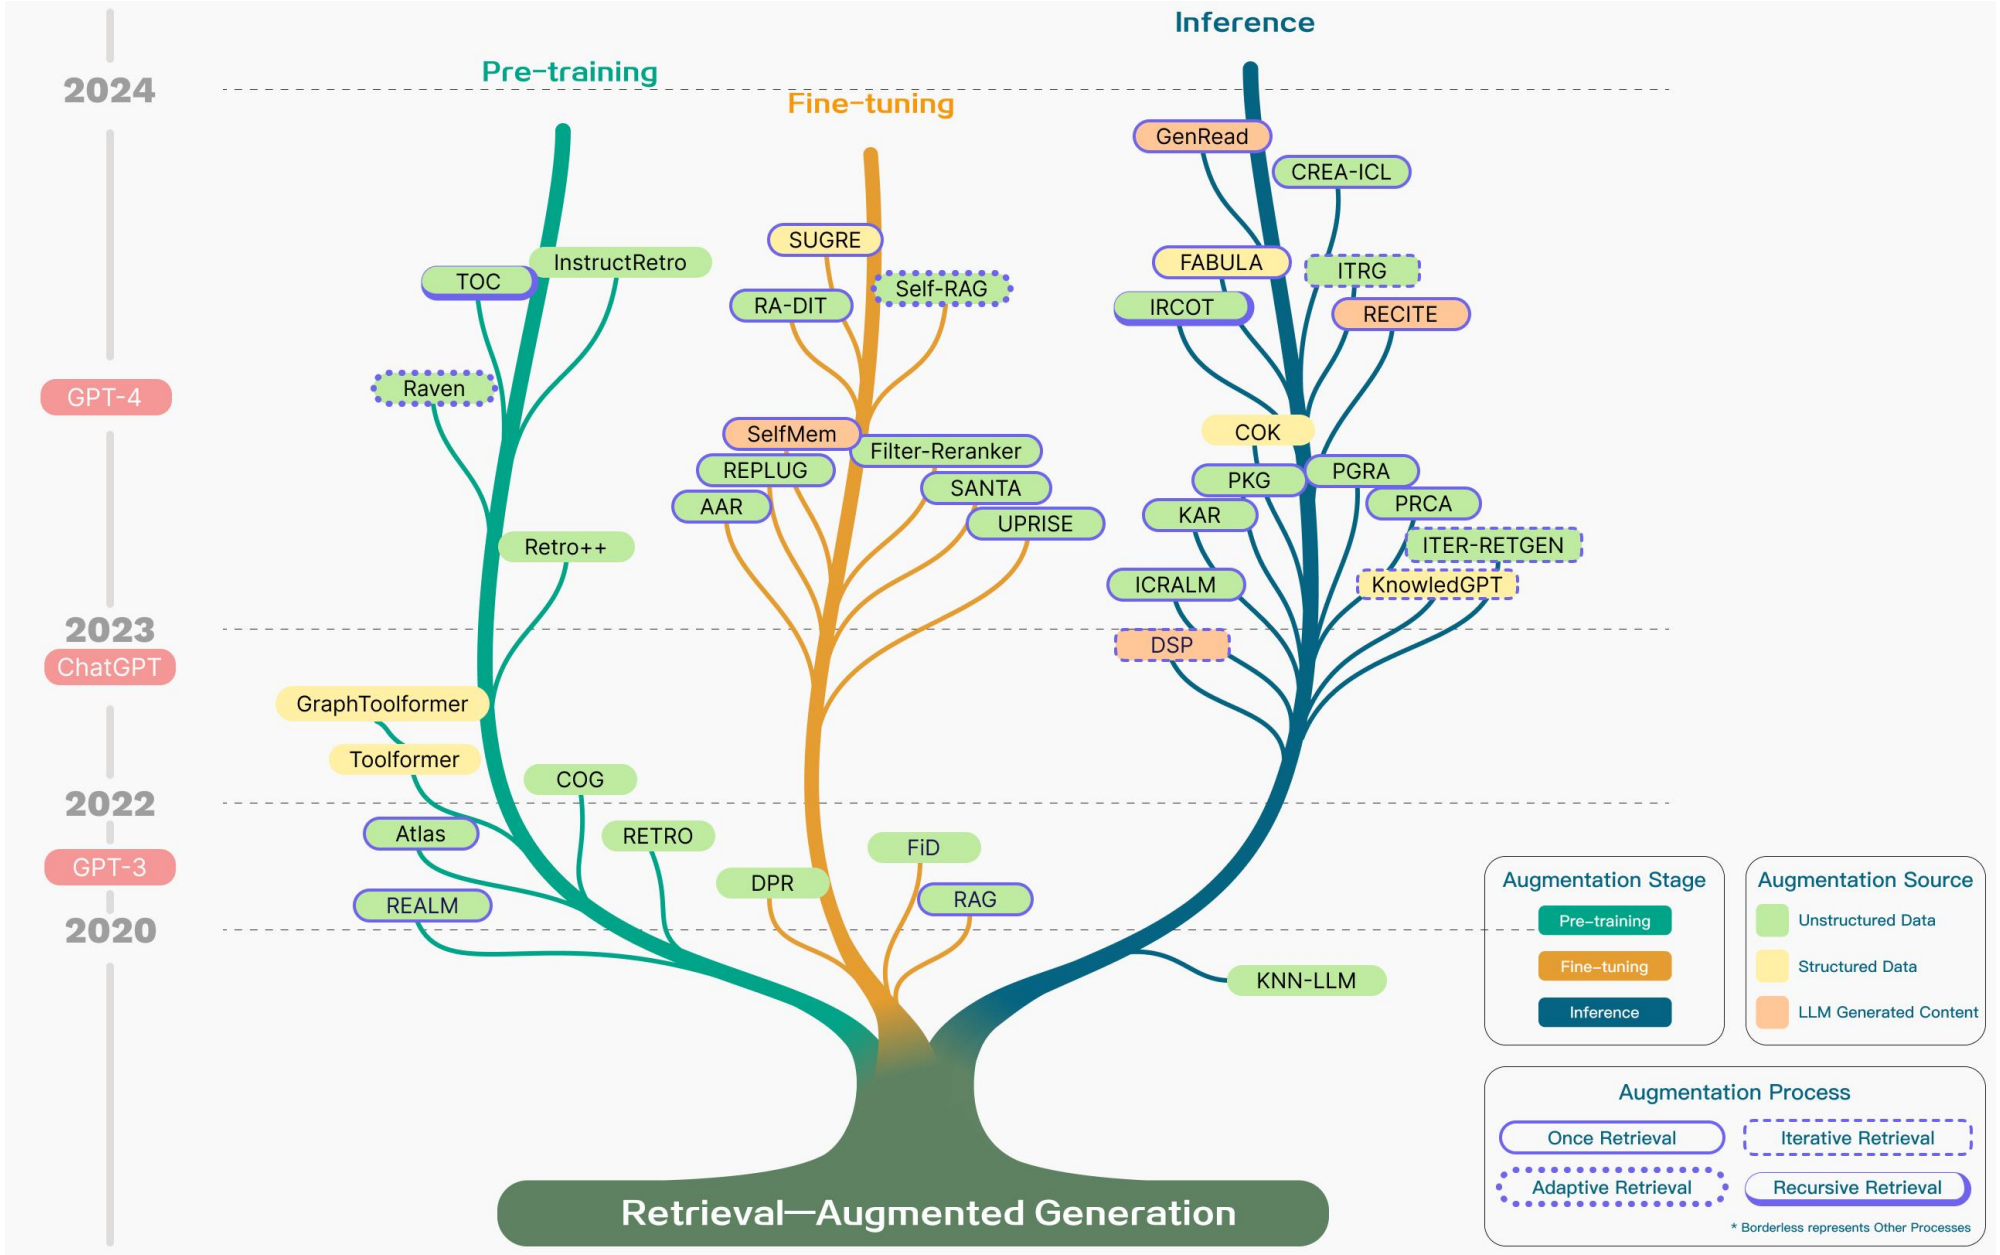
Adaptively conduct the search.

Retrieve once for every N tokens generated.

Low **High**

Retrieval frequency

Overview of RAG Development



PART 03

Key Technologies and Evaluation

Techniques for Better RAG —— Data indexing optimization

Chunk Optimization

Small-2-Big

Embeding at sentence level expand the window during generation process.

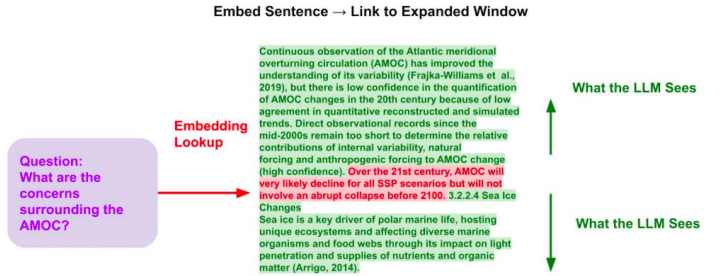
Slidingwindow

liding chunk covers the entire text, avoiding semantic ambiguity

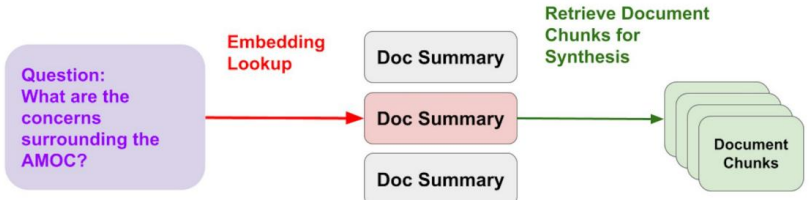
Summary

Retrieve documents through summaries, then retrieve text blocks from the documents.

Small-2-Big



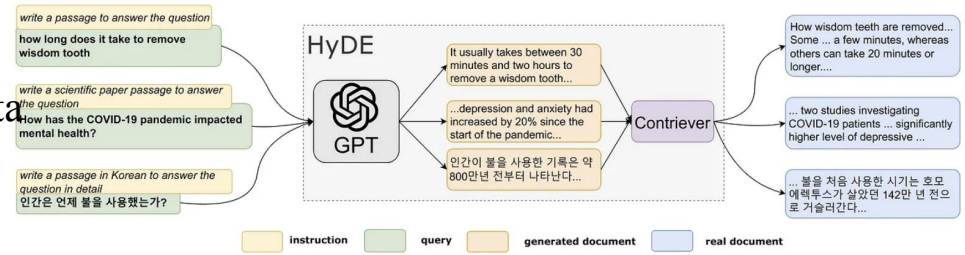
Abstract



Adding Metadata

Example | Page | Time | Type | Document Title

Pseudo Metadata



Metadata Filtering/Enrichment

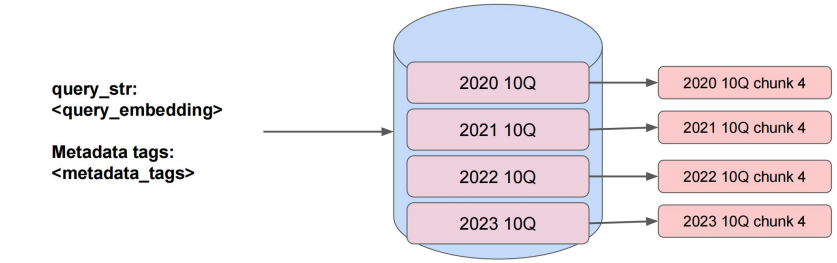
Pseudo Metadata Generation

Enhance retrieval by gener-ating a hypothetical document for the incoming query and creating qu-estions that the text block can answer.

Metadata filter

Dissect and annotate the document. During the query, infer metadata filters in addition to semantic queries

Metadata filter

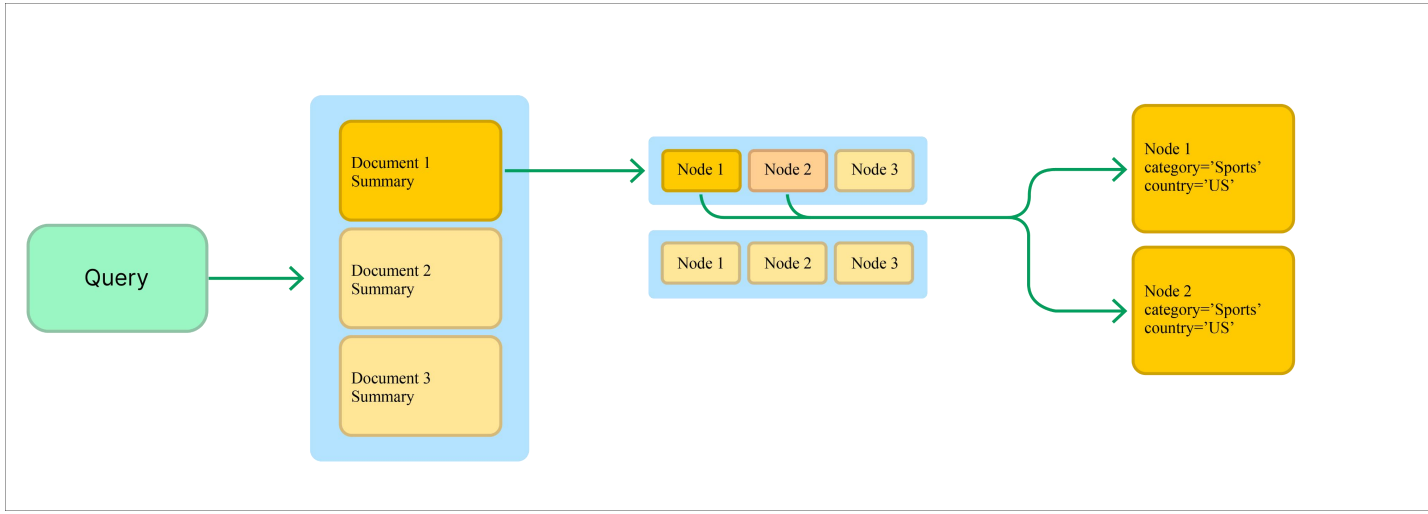


Techniques for Better RAG —— Structured Corpus

Hierarchical Organization of Retrieval Corpora

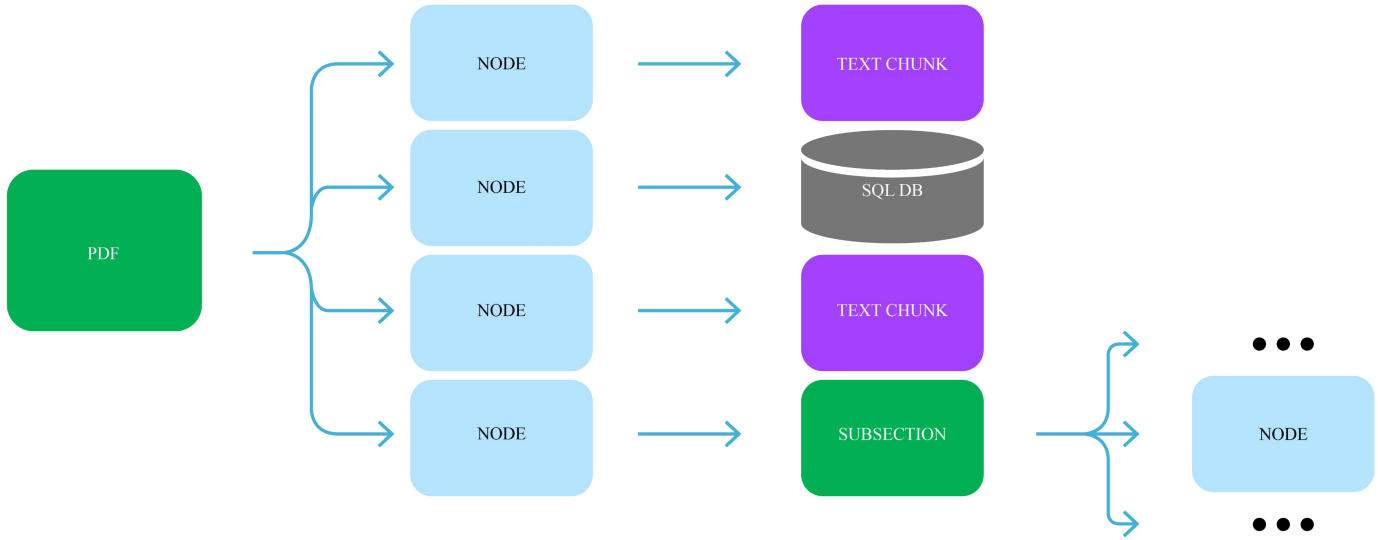
- Summary → Document

Replace document retrieval with summary retrieval, not only retrieving the most directly relevant nodes, but also exploring additional nodes associated with those nodes.



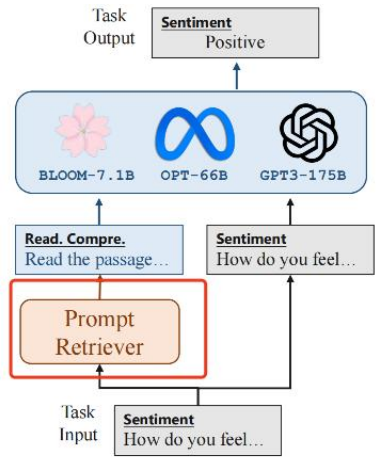
- Document → Embedded Objects

Documents have embedded objects (such as tables, charts), first retrieve entity reference objects, then query underlying objects, such as document blocks, databases, sub-nodes.

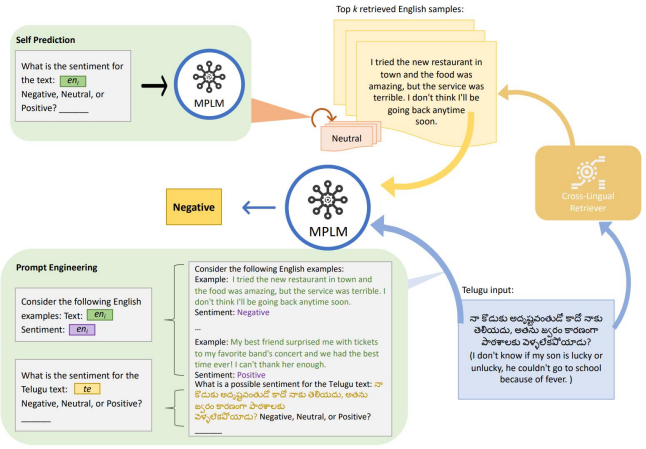


Techniques for Better RAG —— Retrieval Source Optimization

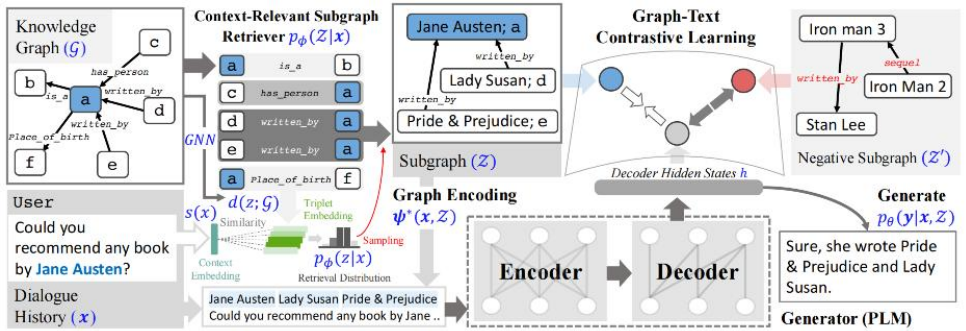
- Unstructured Data
  - Phrases
  - Prompt
  - Cross-lingustic
- Structured Data
  - Triples
  - Subgraphs
- LLM
  - LLM Memory
  - Generated Text
  - Generated Code



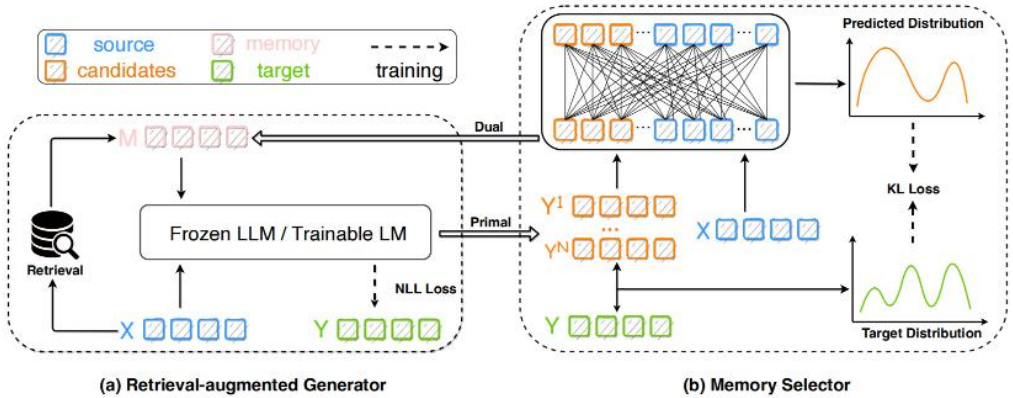
Prompt | UPRISE [Cheng et al.,2023]



Cross-language| CREA-ICL [Li et al., 2023]



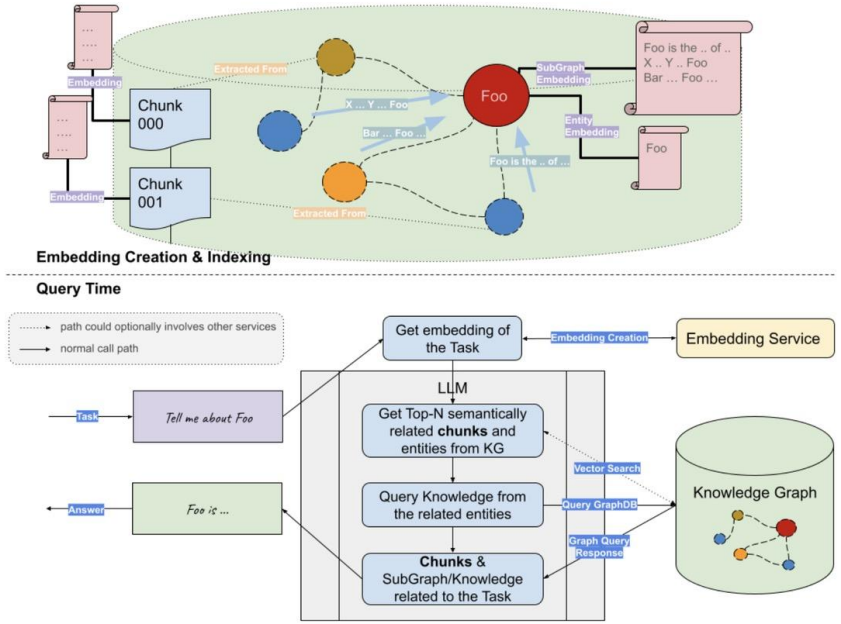
Subgraph | SUGRE [Kang et al., 2023]

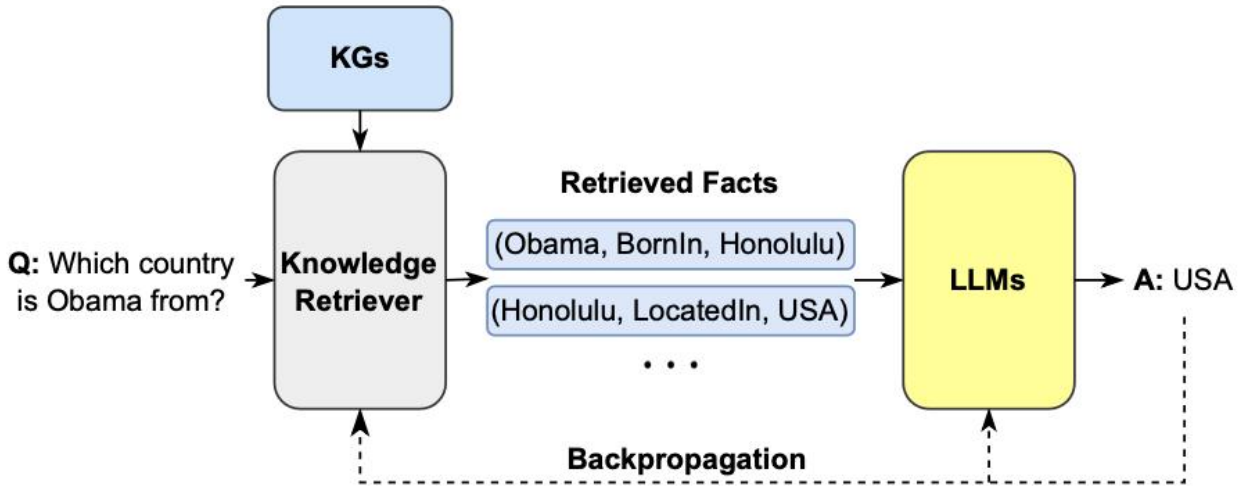


Memory | Selfmem [Cheng et al., 2023]

Techniques for Better RAG —— KG as a Retrieval Data Source

- **GraphRAG**
  - Extract entities from the user's input query, then construct a subgraph to form context, and finally feed it into the large model for generation.
- **Implementation**
  - Use LLM (or other models) to extract key entities from the question.
  - Retrieve subgraphs based on entities, delving to a certain depth, such as 2 hops or even more.
  - Utilize the obtained context to generate answers through LLM.

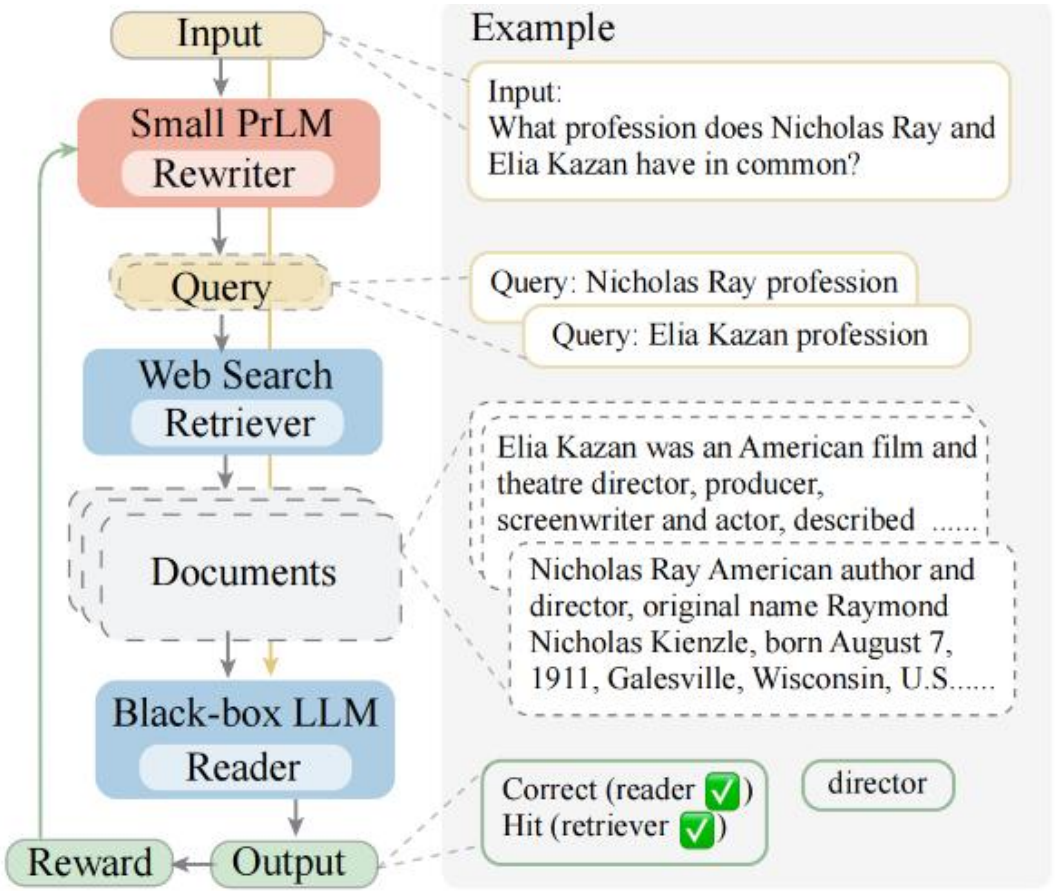




Techniques for Better RAG —— Query Optimization

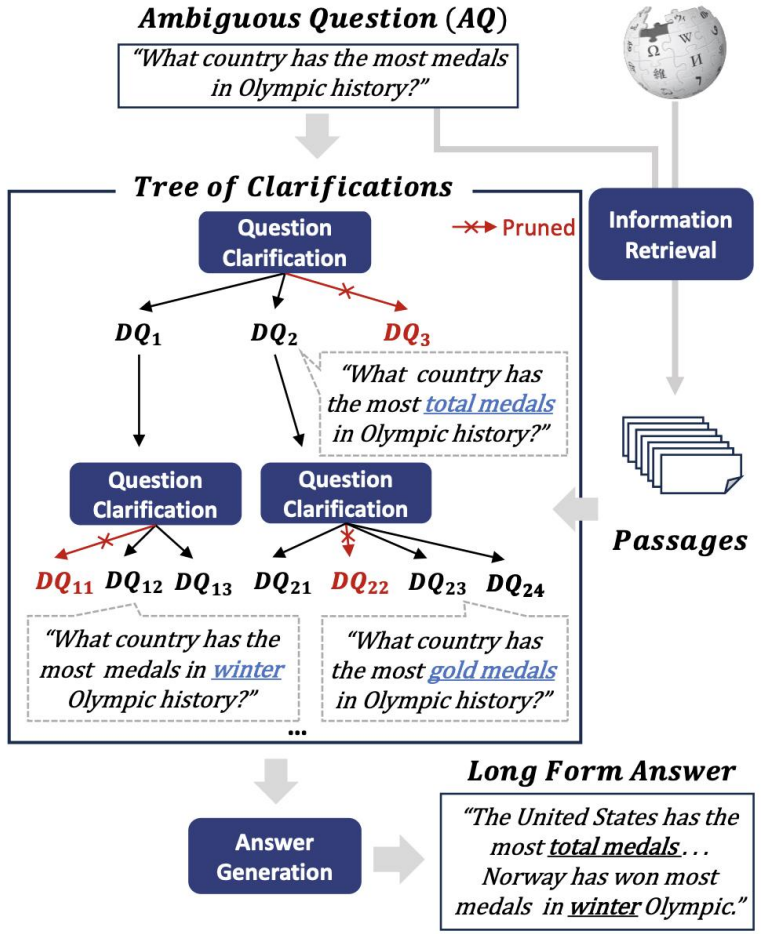
Questions and answers do not always possess high semantic similarity; adjusting the Query can yield better retrieval results.

Query Rewriting



Rewrite-Retrieve-Read [Ma et al., 2023]

Query Clarification



Tree of Clarifications（TOC）[Kim et al.,2023]

Techniques for Better RAG —— Embedding Optimization

Selecting a More Suitable Embedding Provider

cohere M3E VOYAGE AI

How to Evaluate the Effectiveness of RAG

EvaluationMethods

Independent Evaluation

Retriever
Evaluate the Quality of Text Blocks Retrieved by the Query
Metrics: MRP, Hit Rate, NDCG

Generation/Synthesis
Quality of Context Enhanced with Retrieved Documents Evaluation
Metrics: Context Relevance

End-to-End Evaluation

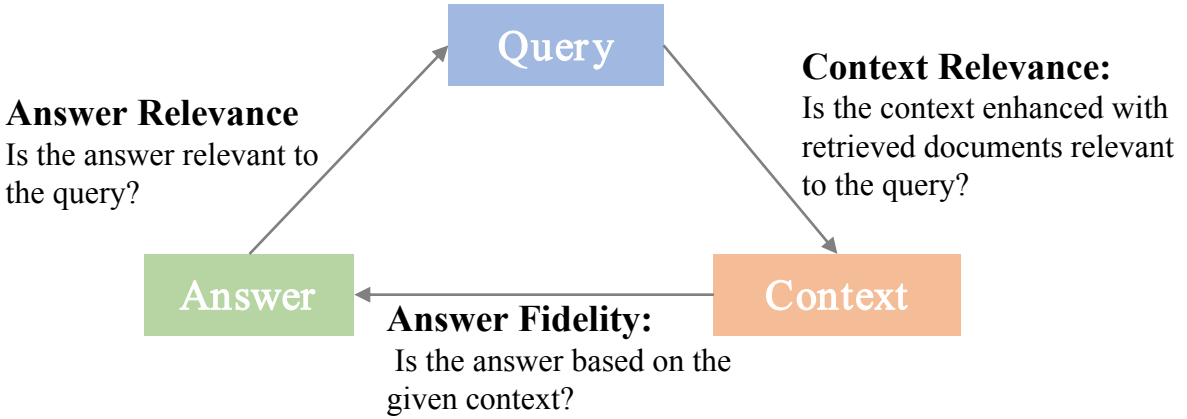
Evaluate the content ultimately generated by the model.

By generated conten
With labels： EM， Accuracy
Without labels: Fidelity, Relevance, Harmlessness

By evaluation method
Human evaluation
Automatic evaluation (LLM judge)

Key Metrics & Capabilities

Key Metrics



Key Capabilities

Noise Robustness
Can the model extract useful information from noisy documents?

Negative Rejection
When therequired knowledge is not exsiting in the retrieved documents, the answer should be refused.

Info Integration
Can the model answer complex questions that require integrating information from multiple documents?

Counterfactual Robustness
Can the model recognize the risk of known factual errors in the retrieved documents?

Assessment Framework

Use LLM as the adjudicator judge.

TruLens | **RAGAS**

Based on handwritten prompt

ARES

Synthetic dataset + Fine-tuning + Ranking using confidence intervals

Evaluation

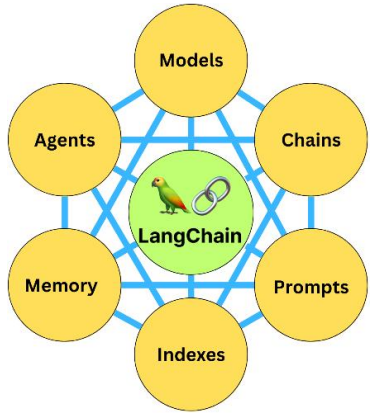
- Answer Fidelity
- Answer Relevance
- Contextual Relevance

PART 04

RAG Stack and Industry Practices

Existing Tech Stack for RAG

Name	Pros	Cons
LangChain	Modular, full-featured	Inconsistent behavior ,API conceals details,complexity and low flexibility.
LlamaIndex	Focus on RAG	Requires combination use, low customization.
FlowiseAI	Easy to get started, visualized workflows.	Does not support complex scenarios.
AutoGen	Adapts to multi-agent scenarios.	Low efficiency, requires multiple rounds of dialogue.



LangChain

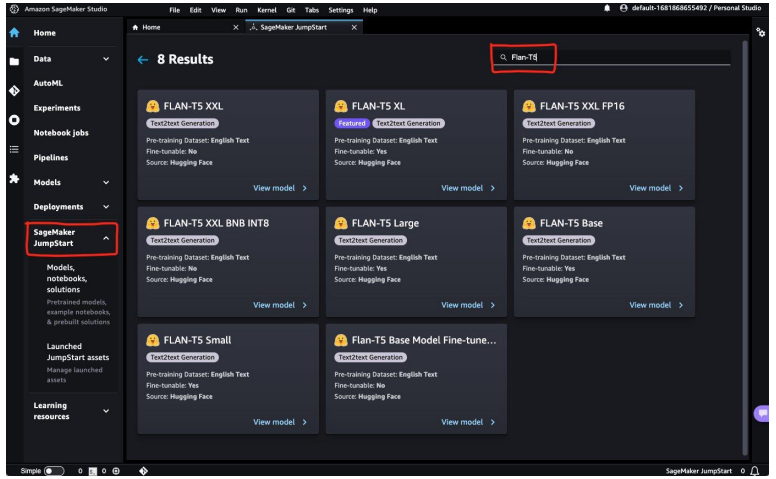
Cohere - Coral

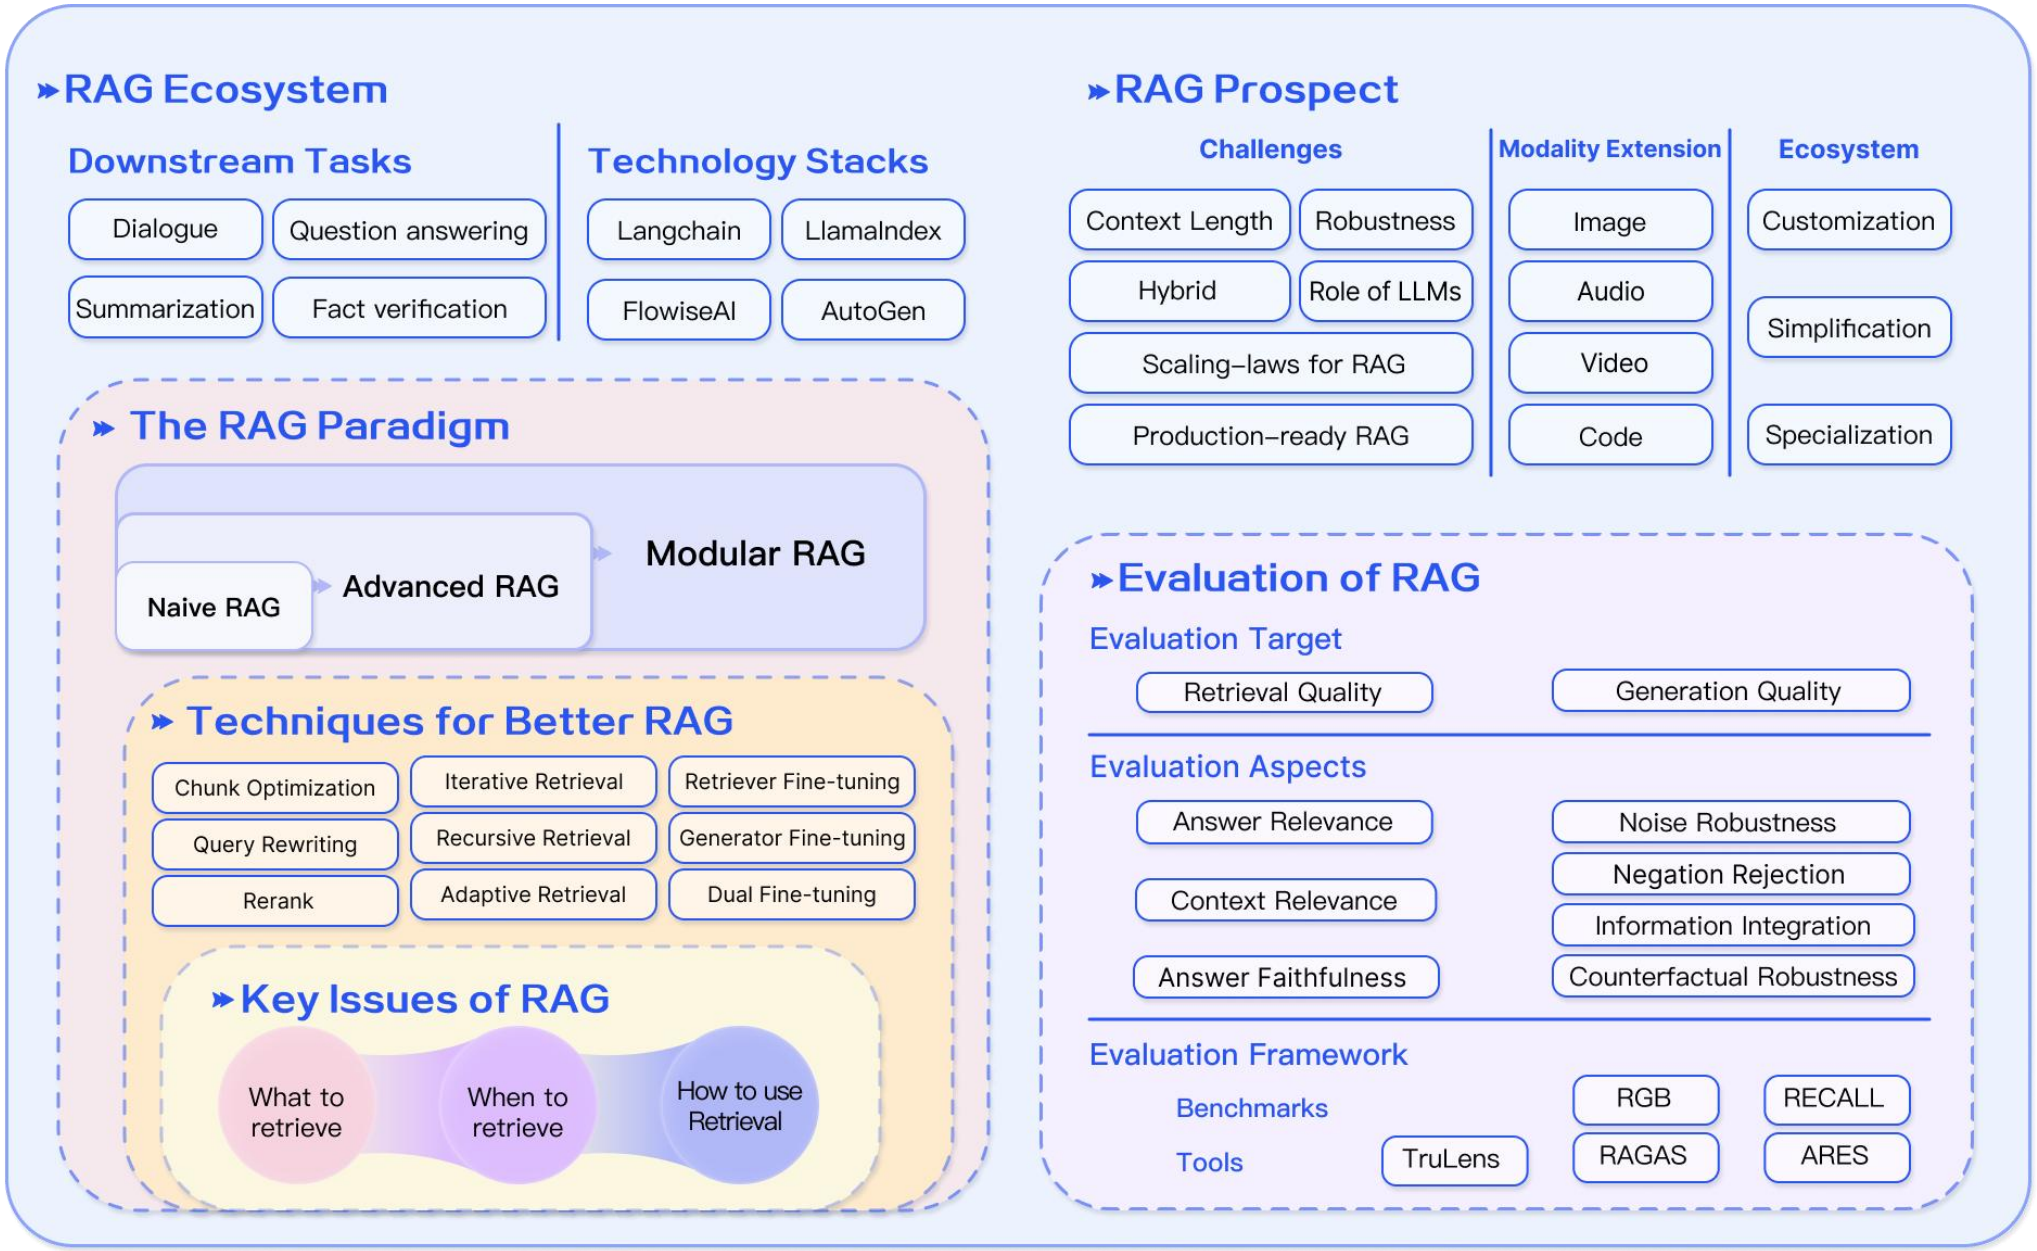


Amazon - Kendra

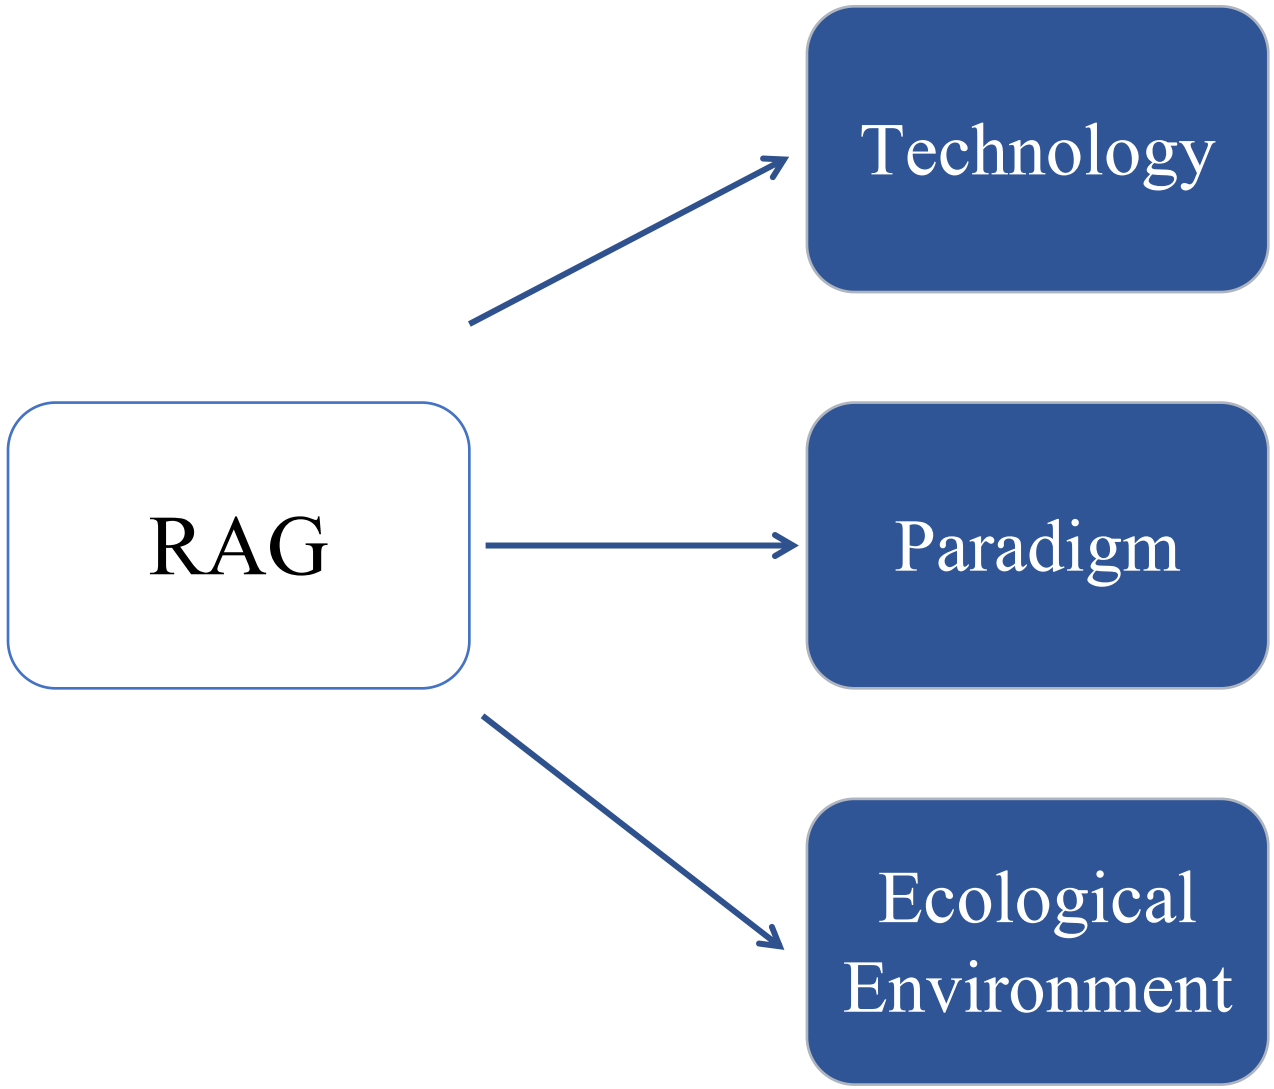
PART 06

Summary and Outlook

Summary — The Framework of RAG



Summary —— Three Trends of RAG



- The Scaling Law of RAG Models
- How to Improve the Efficiency of Retrieving Large-scale Data
- Mitigation of Forgetting in Long-context Scenarios
- Enhancement of Multimodal Retrieval

- Modularity Will Become Mainstream
- Patterns for Module Organization Await Refinement
- Evaluation Systems Need to Evolve and Improve with Time

- Preliminary Formation of Toolchain Technology Stack
- One-stop Platform Still Requires Polishing
- Explosion of Enterprise-level Applications

Prospects — Existing Challengs of RAG

Further address the challenges faced by RAG itself

Long context

- Retrieved content is excessive, exceeding window limit.
- The context is too long to result Lost in the Milddle
- If the context window is not limited, is there still a need for RAG?

Coordination with FT

- How to simultaneously leverage the effects of RAG and FT.
- How do the two coordinate, how are they organized, is it in series, alternating, or end-to-end?

The role of LLMs

- LLM can be used for retrieval (LLM generation replaces retrieval, retrieving from LLM memory), for generation, and for evaluation. How to further explore the potential of LLM in RAG.

Robustness

- Retrieved incorrect content.
- How to filter and verify the content retrieved.
- How to improve the model's resistance to toxicity and noise

Scaling-Law

- Does the RAG model satisfy the Scaling Law
- Does RAG exhibit, or under what scenarios does it exhibit an Inverse Scaling Law

Engineering Practice

- How to reduce the latency of retrieving ultra-large-scale corpora.
- How to ensure that the content retrieved is not leaked by large models

Prospects — Mult-Modality Extension

Transferring the concept of RAG from text to other modalities of data
